Cycle Test Data 100P/200P Switches

## Cycle Test Data on Series 100P and 200P Pressure Switches

## Neo-Dyn® Diaphragm and Piston Type Switches

The following test results were obtained from production units and not special prototypes. The test conditions were far in excess of normal day to day applications.

|  | No of <br> Cycles | Increasing | Decreasing | Repeat <br> Increasing | Repeat <br> Decreasing | Hysteresis <br> Increasing | Hysteresis <br> Decreasing |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Initial <br> Reading | 0 | $100(6.89)$ | $93(0.64)$ | $100(6.89)$ | $93(0.64)$ | $100(6.89)$ | $93(0.64)$ |
| End <br> Reading | 498,200 | $101(6.96)$ | $91(6.27)$ | $100(6.89)$ | $91(6.27)$ | $99.5(6.86)$ | $92(6.34)$ |

Series 200P - (Piston)
Cycled: 0 to 5000 PSI ( 345 bar)
Cycle Rate: 1,800 Cycles Per Minute
Rise Rate: 3,300,000 PSI Per Second
Note: All test pressures are in PSI (bar)

|  | No of <br> Cycles | Increasing | Decreasing | Repeat <br> Increasing | Repeat <br> Decreasing | Hysteresis <br> Increasing | Hysteresis <br> Decreasing |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Initial <br> Reading \#1 | 0 | $1015(69.98)$ | $880(60.67)$ | $1015(69.98)$ | $880(60.67)$ | $1010(69.64)$ | $880(60.67)$ |

Note: $1,635,854$ total cycles on the series 200P and it was still functional.

Notes:

1. Special attention must be called to the rise rate imposed on both series of pressure switches. It was purposely done to impose the most stringent of operating conditions on the entire spring system and actuation mechanism. Most competitive switches subjected to the same test have had a maximum life of 30,000 cycles before catastrophic failure.
2. Also note that the maximum set point shift under these demanding conditions was less than $2 \%$.
3. Regarding the 100P series (Diaphragm); when the pressure rise rate exceeds 100,000 PSI per Second, a snubber should be used.
4. Regarding the 200P series (Piston); the factory should be consulted on applications where the pressure rise rate exceeds 1,000,000 PSI per second.
